Sofia Engineering Specification Book

Version 4.0

Copyright © 2026 Ana Gemma Bendanio.

All rights reserved.

This publication documents the engineering vision, architecture, design principles, capabilities, operational philosophy, and supporting documentation of the Sofia Project.

Except where otherwise noted, the original content of this publication—including its written material, engineering documentation, architecture descriptions, diagrams, methodologies, framework organization, and project-specific concepts—is the intellectual work of the author and may not be reproduced, distributed, modified, or published in whole or in part without prior written permission from the copyright holder, except as permitted under applicable copyright law.

The Sofia Project was developed through a human-led engineering process that incorporated Artificial Intelligence as an engineering and documentation partner. While generative AI assisted in technical writing, document refinement, architectural analysis, and engineering collaboration, the project's vision, engineering direction, design decisions, documentation approval, and final editorial responsibility remain with the author.

"Sofia" is the name of the AI project described in this publication. The project is intended for educational, research, productivity, and professional assistance purposes. It is not represented as a substitute for licensed legal, medical, financial, engineering, or other regulated professional services. Users remain responsible for exercising their own judgment and obtaining appropriate professional advice where required.

This Engineering Specification may be revised as the Sofia Project evolves. Future editions may introduce architectural improvements, expanded capabilities, revised documentation, and additional engineering guidance while preserving the project's core philosophy and design principles.

For the latest documentation and project updates, please refer to the official Sofia Project repository.
