

Revision History

This section records the major revisions, engineering milestones, and publication history of the Sofia Project. It provides a historical record of how the Engineering Specification and the Sofia platform have evolved over time.

Version	Date	Description	Status
1.0	June 2026	Initial concept and engineering vision of the Sofia Project established.	Completed
2.0	June 2026	Initial system architecture, professional role framework, and engineering direction documented.	Completed
3.0	June 2026	Expansion of Sofia into a structured multi-domain AI engineering project with enhanced documentation and architectural refinement.	Completed
4.0	July 2026	Publication of the first official Sofia Engineering Specification Book , including Parts I–VII, engineering governance, glossary, appendix, acknowledgements, project philosophy, and supporting documentation.	Approved

Version 4.0 Highlights

The Version 4.0 release represents the first complete publication of the Sofia Engineering Specification Book. This edition consolidates the project's engineering vision, architecture, capabilities, design principles, governance, and documentation into a single reference manual intended for publication within the Sofia Project repository.

Major improvements introduced in Version 4.0 include:

- Completion of the official Engineering Specification (Parts I–VII).
- Definition of Sofia's engineering philosophy and guiding principles.
- Documentation of Sofia's professional capability framework.
- Establishment of engineering governance and project documentation standards.
- Publication of supporting reference materials, including the Glossary, Appendix, and Acknowledgements.
- Creation of a human-centered documentation approach designed to be understandable by readers regardless of their technical background.

Future Revisions

Future versions of the Sofia Project will continue to improve the system through engineering refinement, expanded capabilities, documentation updates, and practical experience gained through real-world use.

Every official revision will preserve the project's guiding philosophy while reflecting Sofia's continued growth and evolution.

Guiding Principle

Technology should make human potential bigger—not make humans feel smaller.
